

Coal Mine Methane Gas Generator Sets

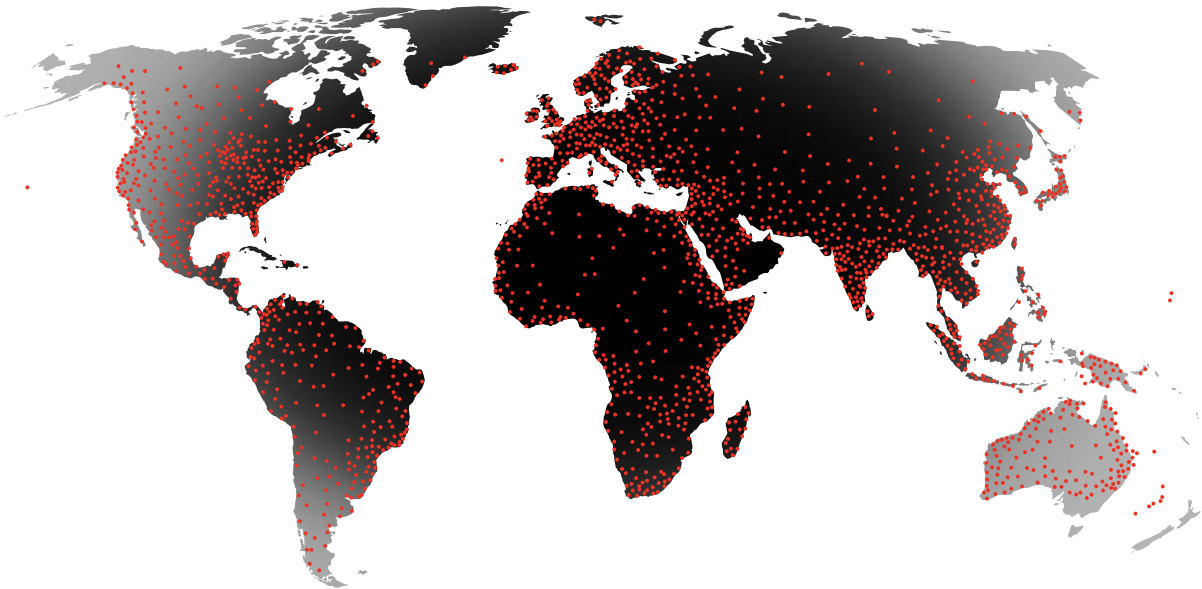

Engineered For a Sustainable Future.

Take Advantage Of Our World Of Experience.

For 90 years, Cummins Power Generation has been a global force in the development of commercial power systems. Throughout that time, our expertise, like our professional reputation, has continued to grow and build. So that today, whilst we are still renown as a world-leader in diesel engine generator sets – indeed, we remain the only supplier to manufacture major components including engines, alternators and controls ‘in-house’ – we have also gained considerable respect and recognition for the environmentally-compliant gas engines we are designing and producing, and the generator sets they are powering.

For coalmine owners, contractors and all those involved with the Clean Development Mechanism (CDM) arranged under the Kyoto Protocol, this area of our product range will deliver important advantages. Not least because our efficient, cost-effective, emissions-reducing power solutions come with an unbeatable parts support and service capability; one that is provided both remotely and through an extensive ‘there when you need us’ local network. Which is our guarantee of customer commitment, and your guarantee of complete peace of mind.

Use Our Know-how To Deliver Real Efficiencies.

Putting our gas-powered generating sets to work turning Coal Mine Methane (CMM) into energy will be good for business; your business.

Our professional system design and engineering teams are well qualified to develop, install and control the smooth running of our CMM gas engines. They understand the specialised requirements of working with methane. And they know how to expertly manage the sudden composition changes that can complicate the process of capturing the gas.

When it comes to converting recovered gas into power and heat, our new CMM gas engines are just as efficient. Like our proven QSV series lean-burn gas engines, they incorporate our advanced low-emissions technology, intuitive digital controls and high quality components. Making them more than capable of increasing energy production and reducing lifecycle costs.

Since installation in 2004, our eight generator sets in service at one of Australia's most productive Coal Seam Methane power plants have delivered a consistently high performance at 90-100% load.

Rely On The Local Support Of Our Global Network.

Quality, capacity, compliance and capital cost are all vital considerations when you invest in generator sets for CMM applications. But they are not the only ones. You need to know that all the major components in the system you'll be working with will come with the very best engineering and service support. And that's precisely what you get when you work with Cummins Power Generation.

Operating on a local level, the strength of our global support means every product we manufacture comes the reassurance of our verified technicians, dedicated distributors, and one of the world's most comprehensive parts and service networks. It offers you the reassurance you want throughout the lifetime our products are in use. Which means whenever you need us, we'll be there.

Find Out More About How Our Capability Will Improve Yours.

To find out about the valuable contribution our CMM gas engines and generating sets will make to your business, simply contact our ESB team at your nearest location. Our expertise will put your operation at a powerful advantage.
